

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings of claims in the application:

Listing of Claims:

1 Claims 1-4 (Canceled).

1 5. (currently amended) A method of providing a user with audio content, the
2 method comprising the steps of:

1 providing a user-device with an audio content menu of audio content links over a data
2 channel, wherein an audio content link includes an audio content reference to audio
3 content;

4 receiving a request from the user-device for audio content over a voice channel at a
5 telephony system, wherein the request contains the audio content reference to the audio
6 content requested;

7 providing the audio content reference to an audio server;

8 determining, using the audio server, the audio content associated with the audio content
9 reference; and

10 sending the audio content to the userdevice.

1 6. (Original) The method of claim 5, wherein the request comprises a
2 telephone number and extension.

1 7. (Original) The method of claim 6, wherein receiving the request
2 comprises reading the telephone number and extension with caller-ID.

1 8. (Original) The method of claim 8, including the step of matching a caller
2 identification with an identification in a user database to determine a userid.

1 9. (Original) The method of claim 5, wherein receiving the request further
2 comprises:

1 sending a signal from the telephony system to the device;

2 sending the audio content reference to the telephony system when the device receives the
3 signal.

1 10. (Original) The method of claim 5, wherein receiving the request includes
2 a digit collect.

1 11. (Original) The method of claim 5, wherein receiving the request
2 comprises sending the audio content reference in a series of tones.

1 12. (Original) The method of claim 5, further comprising associating an
2 identifier with the audio content reference.

1 13. (Original) The method of claim 12, wherein receiving the request
2 comprises using the identifier to associate the audio content reference with the request.

1 14. (New) A telephony system for referencing audio content for a device, the
2 system comprising:

3 a telephony platform configured to send a menu that includes one or more audio
4 content links to the device over a data channel and to establish a voice connection with the
5 device, wherein an audio content link in the one or more audio content links is received from the
6 device over the voice connection;

7 a database that includes one or more database references, wherein the one or more
8 database references correspond to the one or more audio content links, wherein a database
9 reference in the one or more database references is associated with audio content; and

10 an audio server configured to receive the audio content link from the telephony
11 platform and to determine a database reference that corresponds to the received audio content
12 link and send audio content corresponding to the database reference to the device.

1 15. (New) The telephony system of claim 14, wherein the audio content
2 reference comprises a telephone number.

1 16. (New) The telephony system of claim 15, wherein the audio content
2 reference comprises an extension at the end of the telephone number.

1 17. (New) The telephony system of claim 14, wherein the audio content
2 comprises voicemail, email, events and music or radio on demand.

1 18. (New) The telephony system of claim 14, wherein the audio content
2 includes a state of a system, wherein the state of the system is used to determine audio content
3 associated with the audio content reference.

1 19. (new) The method of claim 5, further comprising:
2 generating a web page that includes the audio content menu, wherein providing
3 the device with the audio content menu comprises providing the web page over the data
4 connection.

1 20. (new) The method of claim 5, wherein the device comprises a wireless
2 device.

1 21. (new) The method of claim 5, wherein the device comprises a mobile
2 phone.

1 22. (new) A telephony system for referencing one or more audio content links
2 for a wireless mobile device, the system comprising:

3 a web page generator configured to generate a web page that includes a menu of
4 one or more audio content links;

5 a data channel system configured to send the web page to the wireless mobile
6 device over a data connection;

7 a voice channel system configured to receive an audio content link in the one or
8 more audio content links from the wireless mobile device over a voice connection; and

9 an audio server configured to receive the audio content link from the voice
10 channel system and to determine a reference that corresponds to the received audio content link.

1 23. (new) The system of claim 22, further comprising a database that includes
2 one or more references, wherein the one or more references correspond to the one or more audio
3 content links, wherein a reference in the one or more references is associated with audio content.

1 24. (new) The system of claim 22, wherein the data channel system is
2 configured to generate the web page using one or more references to audio content that is stored.

1 25. (new) The system of claim 22, wherein the voice channel system is
2 configured to establish an initial connection through at least one of a public switched telephone
3 network (PSTN) and a voice over Internet Protocol (VoIP) network.

1 26. (new) The system of claim 22, wherein the voice channel system is
2 configured to send audio content corresponding to the reference to the wireless mobile device.
